Poll on Identity Theft

According to a new Gallup poll of identity theft statistics, 66% of adults worry the most about their identities being stolen.

How often do you, yourself, worry about the following things -- frequently, occasionally, rarely, or never?

■ % Worry frequently/occasionally

Oct. 1-4, 2009

Targeted Theft on Laptops

Survey results released on 15th July 2008 by [The Ponemon Institute](#), which was sponsored by [Dell](#), indicates that more than 10,000 laptops are lost, or stolen, each week at U.S. airports. Are you as surprised as I am?

Not surprised? Well, how about this astonishing statistic from the same survey: 65% of these lost or stolen laptops are not reclaimed, despite the fact that half the laptops contain confidential corporate information.

One can only hope that the data on these laptops was encrypted, although it seems when we read news stories about a lost or stolen laptop, the pattern seems to be as follows; – 200,000 (insert your own number here), bank account numbers, Social Security Numbers, names, addresses and dates of birth were on an unencrypted laptop stolen/lost earlier this week.

Other available statistics indicate that a laptop is stolen, not lost but stolen, every 53 seconds and 97% of stolen laptop computers are never recovered. So what can you do to increase the probability that should your laptop be lost or stolen, you have a better chance that it will be returned to you, than the above statistics indicate?

MAS Circular

MAS expects all financial institutions to implement appropriate security solutions to address the risk of data theft, data loss and data leakage from endpoint devices, customer service locations and call centres, whether domestic, overseas or under outsourcing arrangements. Confidential customer information stored in all types of endpoint devices should be properly protected with strong encryption. A definitive plan containing specific implementation dates should be formulated to achieve these security targets.

TRILLIANT

Trilliant Technologies

Objective

Our goal is to provide a seamless solution that focuses on enhancing End-point Device Protection & Control for your Business Continuity processes

Trilliant Technologies

Solution

Our solution is driven at
Protecting and **Managing**
Hardware/End-point devices
resulting in full data
Protection and **Encryption**

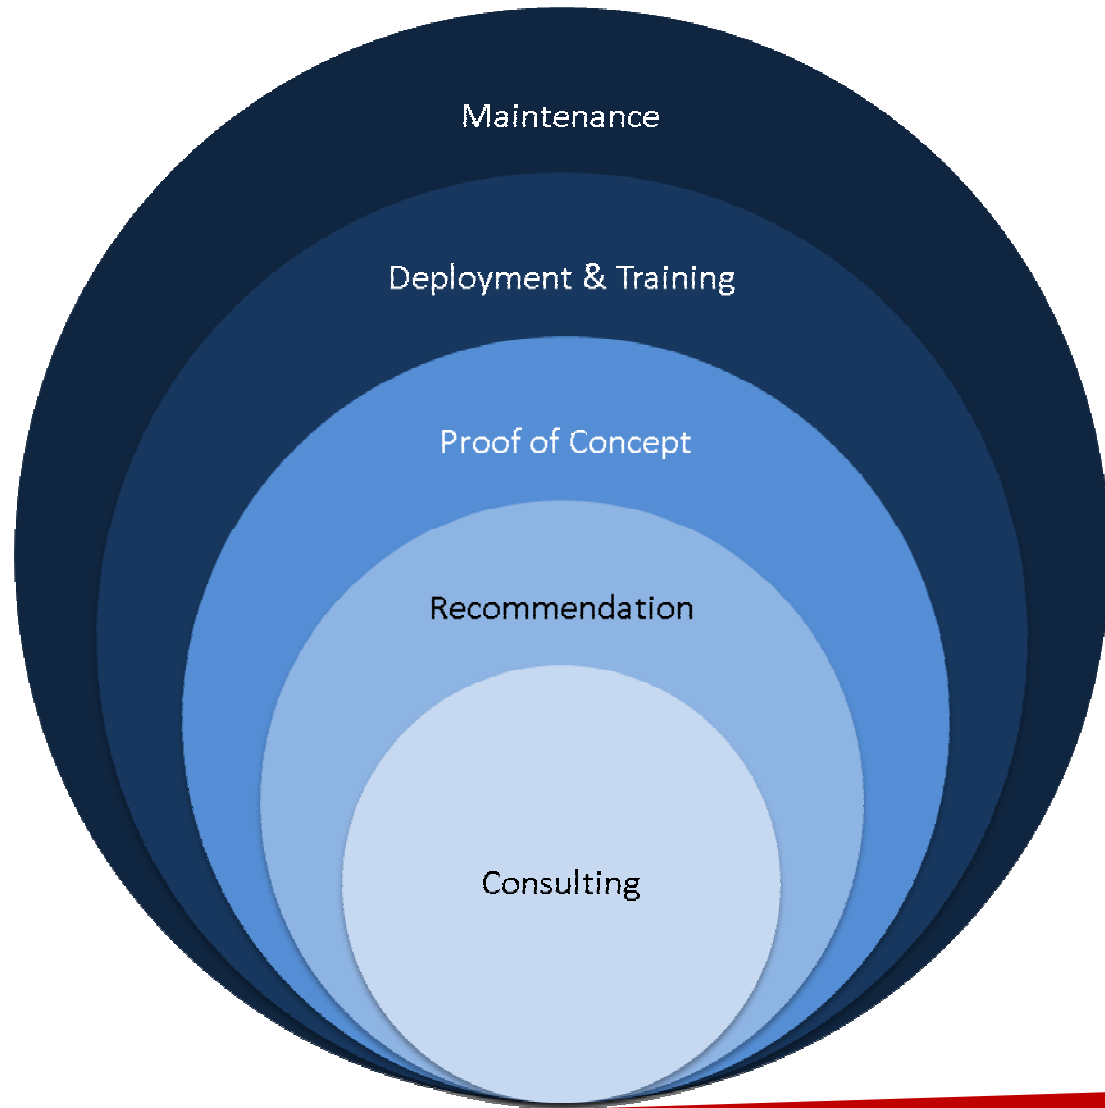

Trilliant Technologies

Strategy

Trilliant Tech works on the methodology of understanding your business processes before recommending and implementing suitable solutions to enhance your information integrity needs

Trilliant Technologies

Strategy

TRILLIANT

Trilliant Technologies

Execution

Trilliant Technologies has partners in providing software solutions, deployment services (CISSP certified Engineers) and training on BCM (Business Continuity Management) awareness.
